Background Note and Agenda

Closed-Door Roundtable on India's First National Dashboard on Power Quality

Background and Context

Reliable and good-quality electricity is fundamental to India's economic growth, industrial competitiveness, digital transformation, and energy transition. While India has made significant progress in expanding electricity access, strengthening generation capacity, and improving the reach of its transmission and distribution networks, ensuring consistent power quality remains an important priority. Consumers across residential, commercial, agricultural, and industrial segments depend not only on the availability of electricity but also on its quality, reliability, and stability.

Power reliability and quality encompasses several dimensions, including number and duration of interruptions, voltage fluctuations, voltage sags and swells, frequency variations, harmonics, interruptions, and other electrical disturbances that can affect the performance of equipment and electrical systems. Poor power quality can lead to equipment damage, production losses, higher operating costs, and reduced energy efficiency. These challenges are particularly significant for industries relying on sensitive electronic equipment, automated manufacturing processes, and digitally enabled operations.

Addressing power quality challenges requires a systematic approach supported by reliable data, consistent measurement methodologies, transparent reporting, and coordinated action among relevant stakeholders. However, information on power quality is often fragmented across utilities, regulatory institutions, central entities and consumer groups. The absence of a consolidated national-level view can make it difficult to identify regional and systemic trends, benchmark performance, prioritise interventions, and assess the effectiveness of corrective measures.

The National Power Quality Dashboard

The proposed dashboard on Power Quality seeks to address this information gap by providing a consolidated platform for monitoring, analysing, and communicating power quality indicators. By bringing relevant data and insights together, the dashboard has the potential to support evidence-based policymaking, improve institutional accountability, facilitate performance benchmarking, and inform targeted interventions by utilities and other stakeholders.

The dashboard's effectiveness will depend on the relevance and reliability of its underlying data, the robustness of its indicators, the consistency of measurement and reporting practices, and its usability for different stakeholder groups. Its design must also balance transparency and accessibility with appropriate data governance, validation, and safeguards against misinterpretation.

Purpose of the Roundtable

The closed-door roundtable is being convened to solicit feedback from a select group of stakeholders and subject-matter experts on the dashboard's design, indicators, data architecture, and potential applications. The discussion will explore whether the dashboard captures the most relevant dimensions of power reliability, quality, how data gaps and inconsistencies can be addressed, and what institutional arrangements may be required to ensure regular updates and sustained use.

Inputs from the roundtable will help identify opportunities for refinement, strengthen the dashboard's practical relevance, and build consensus around its future development. The overarching objective is to ensure that the National Power Quality Dashboard evolves into a credible, actionable, and widely useful instrument for improving power quality outcomes across India.

Proposed Agenda

Time	Agenda	Lead
10:30 AM	Tea/Coffee	
11:00 AM	Welcome Remarks	Vaibhav Chowdhary
11:05 AM	Key-Note Address	Mr. Rakesh Kacker
11:15 AM	Theme Address	
11:25 AM	Dashboard presentation	Navya and ACPET team
12:00 PM	Moderated discussion	All invited experts, moderated by Dr Gaurav Bhatiani
1:00 PM	Lunch	

Location:

Ground Floor Conference Room, The Smart Grid Lab,

Tata Power Delhi Distribution Limited,

K. N. Katju Marg, Sector 15, Rohini.
